PERSONAL STATEMENT

Senior Web and Mobile Engineer with over 5 years of experience designing, building, and shipping production web and mobile applications across local delivery, online commerce, live GPS tracking, and digital payments. Experienced in taking full ownership of features on both the server and client using **React Native, React, Vue and Nuxt, Node.js, Express, MySQL, PostgreSQL, Redis, Socket.io, and Google Cloud Platform (GCP)**. Skilled at working with greenfield and existing codebases, managing relational database schemas, building reliable REST APIs and HTTP clients, and collaborating in daily team discussions.

CORE TECHNICAL SKILLS

Client & Mobile:	React Native, Expo, React.js, Vue 3, Nuxt 3, JavaScript (ES6+), TypeScript, TanStack Query, HTML5, CSS3, Tailwind CSS
Server & APIs:	Node.js, Express.js, REST APIs, HTTP Clients, Socket.io (WebSockets), BullMQ, Redis Pub/Sub, Webhook Processing
Databases & Cloud:	MySQL, PostgreSQL, Database Schema & Migration Management, Database Transactions & Concurrency Control, Google Cloud Platform (GCP), Google Cloud Storage
Security & DevOps:	Docker, Git, Linux, CI/CD (Codemagic, EAS, Vercel), JWT Authentication, Two Factor Authentication (2FA), Signed URLs, Idempotency Keys
Delivery & Commerce:	Local Courier Dispatch, Live GPS Tracking, QR Code Proof of Delivery, Escrow Workflows, Merchant Storefront Integrations

PROFESSIONAL EXPERIENCE

Technical Founder & Lead Engineer | Xernee — 2024 to Present

React Native, Node.js, Express, MySQL, Redis, BullMQ, Socket.io, Nuxt 3, Google Cloud Platform | xernee.com/download

- **Full Stack & Mobile Architecture:** Designed, built, and shipped the complete platform across a cross platform React Native mobile app (live on Apple App Store and Google Play Store), a Node.js and Express backend, and a Nuxt 3 web storefront and merchant portal.
- **Local Courier Dispatch & Live GPS Tracking:** Built the on demand delivery system with distance based pricing, courier collateral management, live WebSocket GPS tracking, and background job queues that match orders to nearby online couriers.
- **QR Proof of Delivery & Escrow Handoff:** Implemented QR code order collection that holds payment in escrow at checkout and releases funds to merchants and couriers only when the pickup or delivery QR code is scanned, while syncing scan status live to the merchant web dashboard via Socket.io.
- **Database Schema & Payment Integrity:** Managed relational MySQL schemas and migrations, using database transactions and row locking to prevent stock overselling, server side price validation, idempotency keys, and webhook signature verification.
- **Google Cloud & Security Infrastructure:** Configured media storage and streaming on Google Cloud Storage (GCS), built expiring signed URLs for private verification documents, and added authenticator 2FA protection for merchant web sessions.

Senior Systems & Web Engineer | Jons World

2023 to Present

Node.js, Express, Nuxt.js, MySQL, PostgreSQL, REST APIs, Tailwind CSS | jons-liart.vercel.app

- Developed and maintained client and server solutions for web applications, managing database schemas, REST endpoints, and responsive user interfaces across desktop and mobile devices.
- Improved existing backend routes and SQL queries to reduce response times, strengthen input validation, and make HTTP client calls more reliable.
- Worked closely with stakeholders to plan features, resolve production issues, and ship updates smoothly.

Mobile Developer | Bold Better Living (BBL)

2025 (Contract)

React Native, Expo, REST APIs, AI Integration | boldbetterliving.com

- Built the BBL wellness mobile application using React Native and Expo, implementing nutrition, fitness, weight loss tracking, and daily check in features guided by an in app AI assistant.
- Created reliable HTTP client services, local state persistence, and smooth mobile navigation for iOS and Android users.

Frontend & API Integration Developer | Exquisite Escape

2024 to 2025 (Contract)

Nuxt.js (SSR), Node.js, Amadeus REST API, Vercel | exquisite-escape-nuxt.vercel.app

- Integrated the Amadeus API to power live flight search, route queries, real time pricing, and end to end travel booking workflows for flights, hotels, and tours.
- Engineered the web frontend using Nuxt.js with Server Side Rendering (SSR) for fast load times and managed continuous deployment on Vercel.

Full Stack Developer & Technical Instructor | Geosolutions & Independent Projects

2021 to 2024

JavaScript, Node.js, Express, Vue.js, PHP, MySQL, PostgreSQL, Linux, Git

- Built and maintained full stack web applications and REST APIs including **GeoEdu360 API** (authentication, session security, digital ePIN purchases, and transaction logging), **Tech Care** (healthcare records platform), and **Fashion Hub** (merchant and customer marketplace).
- Coached and mentored junior developers and IT interns in frontend and backend engineering across JavaScript, Vue.js, Node.js, Express, SQL databases, Git, and Linux.

EDUCATION & DETAILS

- **Computer Science** | Yaba College of Technology (YabaTech), Lagos
- **Certification:** Full Stack Software Development | New Horizons
- **Languages & Availability:** English (Fluent) | Available for full EST hours overlap starting 9:00 AM EST
